

ABSTRACT

Disclosed herein are a resin pipe, a process for
5 production thereof, a base for a photosensitive drum, and a
photosensitive drum formed from said base, said
photosensitive drum being used for electrophotographic
apparatus such as copying machines, facsimiles, and printers.
The base has a tapered inner surface with a specific taper
10 angle (θ). The base also has a projection formed at a
specific position. The base is formed from a specific
molding material.
